SUMMARY

Network & IT Ops Admin specialized in building and maintaining high-efficiency IT ecosystems. I combine hands-on technical expertise in infrastructure management with a strategic approach to budgeting and process automation. Focused on eliminating technical debt, enhancing cybersecurity postures, and deploying innovative solutions that empower teams to work faster and more securely.

EXPERIENCE

Network & IT Operations Admin

H/L Agency

August 2021 - Present, Oakland, CA

- Developed and executed IT strategies that resulted in increased operational efficiency and a reduction in costs.
- Managed and enhanced OKTA and Google Workspace environments, including the implementation of Single Sign-On (SSO) connections for key applications such as Egnyte, Ringcentral, and Slack, improving user access efficiency.
- Provided Helpdesk support for the Organization, resolving technical issues and improving user satisfaction while managing Windows and Mac systems and ensuring high uptime.
- Optimized video edit server by streamlining rendering processes and media workflows, resulting in significantly faster project turnaround times and enhanced collaboration.
- Spearheaded the development and implementation of advanced AI models, significantly enhancing predictive capabilities and driving strategic decision-making across the organization.
- Directed security enhancements, including SOC recommendations and compliance for PCI DSS and HIPAA, within the organization's file server system.
- Implemented multi-factor authentication and endpoint detection and response solutions, reducing attack surface and improving threat detection.
- Managed a cross-functional team to deliver complex software projects on time and within budget, ensuring all stakeholder requirements were met.
- Managed network infrastructure and resolved complex technical issues to ensure high availability, optimal performance, and improved system stability.
- Evaluated and integrated AI tools to analyze security implications and develop implementation strategies that enhanced organizational impact.

Systems Administrator

Challenger Sports

September 2020 - June 2021, Lenexa, KS

- Managed and optimized system hardware, software, and infrastructure, including network administration and security implementation, to enhance operational efficiency.
 - Built and maintained a familiarity with all systems, programs, machines, configurations, and 3rd parties that interoperate with the organization's systems or provided digital services to the organization. Including but not limited to Mac OS, Chrome OS, Windows 10, Windows Server 2012, Google Workspace (GSuite), Active Directory.
 - Built and maintained positive relationships with each department and division in order to maximize systems interoperability and reduce duplicitous waste.
 - Time to implement a solution decreased by 50% via documentation and implementation of e-mail ticket alerts to all technicians.
 - Participated in technical research and development to enable optimal continuing innovation within the greater infrastructure of the organization.
-

EDUCATION

Bachelors of Science in Sports Management

Minor in Business • University of Kansas • Lawrence, KS • 2016

Masters of Science in Cybersecurity and Information Assurance

Western Governors University • 2022

CERTIFICATIONS

CompTIA Security Analytics Professional

CompTIA • 2021

- Earners of the CompTIA Security Analytics Professional (CSAP) are security analytics professional that have the ability to plan and carry out security measures to protect an organization's computer networks and systems.

Google IT Support Professional Certificate

Google • 2020

- Those who earn the Google IT Support Professional Certificate have completed five-courses, developed by Google, that include hands-on, practice-based assessments and are designed to prepare them for entry-level roles in IT support. They are competent in foundational skills, including troubleshooting and customer service, networking, operating systems, system administration, and security.

Certified Ethical Hacker (CEH)

EC - Council • 2022

- The Certified Ethical Hacker (CEH) credential is the original and most trusted ethical hacking certification and accomplishment recommended by employers globally. It is the most desired information security certification and represents one of the fastest-growing cyber credentials required by critical infrastructure and essential service providers. Since the introduction of CEH in 2003, it is recognized as a standard within the information security community.
